

TOTE MANIFOLD SYSTEM

The Tote Manifold System (TTM) provides the end-user with a simple to install solution that links together totes in to a single pump suction point. No further need to move your pump around from tote to tote. The prepackaged kit comes assembled and ready to go after a few easy steps for installation. The TTM features a dual opening lid design with standardized 4-cam valves preinstalled for quick and easy refilling of each tote. The two hole cap replaces the current lid on your tote and is designed to incorporate your existing valve and coupler. Connect the TTM to the couplers and the pump and you're ready to dispense!

Available in 2 or 3 tote configurations.

(Totes and Pump not included.)
